

Solar Generator™

Solutions From Science®

Model PS 1800

EASY TO USE!
JUST POINT,
PLUG, AND
POWER UP!

Plug And Play Portable Power System That Needs No Installation

The Solar Generator from Solutions From Science is the perfect plug and play solution for continuous emergency backup power. The Solar Generator (PS1800) supplies uninterrupted backup power for a variety of household and emergency appliances including lights, computers, televisions, radios and sump pumps.

As a true off-the-grid appliance, the Solar Generator is also a great alternative to gas generators, offering clean renewable energy with no ongoing costs. Unlike gas generators, the Solar Generator runs quietly and emits no fumes while producing electricity directly from the sun. Whether it's hurricanes, ice storms, brownouts or blackouts, the Solar Generator offers a reliable source of permanent power.

The Solar Generator is also easy to move around and great for a variety of uses away from home such as camping, boating, and providing remote power for construction sites. Easy to use – simply point, plug-in and power up. Provides portable household power wherever it is needed.

Product Features

- 1800 watt inverter with five 120 volt outlets
- Digital LED display indicates battery capacity status
- High efficiency 90 watt solar panel for fast system recharge
- Solar panel cart features wheels for easy placement
- Solar panel cart includes summer/winter sun angle settings
- Charge from solar panel or AC outlet

Product Applications

- Home Backup Power will operate refrigerators, freezers, sump pumps, fish tanks, home alarm systems, and garage door openers.
- Emergency Power runs essential electronics including TVs, radios, fans, mobile and cordless phones
- Remote Power is perfect for construction sites, camping, boating and outdoor events
